Indexable Broaching System

Mini Motorized Slotter
Faster CNC Broaching Made Easy!

The duMONT CNC motorized mini slotter can easily handle internal and external keyway and spline profiles in significantly shorter cycle times while consolidating operations in one machine and eliminating secondary broaching operations.

The Mini Motorized Slotter, which is now adapted for Tsugami Models, can easily handle external and internal keyway and spline profiles with cycle times that are 5-10x faster than any other CNC Broaching Tools. The 6-sided Ram design offers maximum torsional rigidity for a superior tool finish and life while being easy to maintain based on the ability to grease/lubricate the machine.

The Mini Motorized Slotter, along with our other various slotters, are ideal for OD & ID slotting, hex and square shaping holes and OD & ID splines in the automotive, firearms, power transmission, marine and other high-precision applications.
